

A NEW DEFINITION OF ENTERPRISE GRADE CONNECTIVITY: MEET THE **FERRANTI-3X BORDERLESS NETWORKS SOLUTION**

tailored to your needs

Borderless Networks Collection

FERRANTI
computer systems

Ferranti-3X

**The lion among the networks.
Fast and powerful.**

A smart network which provides you exactly what you need, always.

For this solution we work with these partners:

For whom is this the perfect solution?

Your company has more than 250 IT end users and a dedicated IT department which manages the networks. They provide support for the complex technical landscape and the applications used by the company. Intelligence and automation are required from the systems to ensure the necessary performance.

Did you answer YES?

Then our Ferranti-3X borderless networks solution, could be a perfect fit for you!

Advantages

- > **Business/Application Focus:** Unleash the full potential of your applications with the extreme performance and predictability of the Ferranti-L solution.
- > **Innovation & Acceleration:** Integrated solutions accelerate your IT operations and are the foundation for the modern technologies with which you can manage your future initiatives.
- > **Intelligence & Automation:** Process-driven IT infrastructure ensures that the right resources are deployed and addressed at the appropriate time.
- > **Segregation:** "Each component has its own specialty" The system will determine which specialized hardware or technology it has to address for a certain function.
- > **Performance Focus:** Maximum performance for critical business processes. Allocate more processing power and/or resources to the processes that are important to you.
- > **Maturity:** A healthy mix of new technologies and proven methods provide a modern and robust network.
- > **Granular:** All features are configurable, e.g. you can easily add functionality, delete or modify as needed.

CLIENT ACCESS

- Converged 10G backbone
- Full fiber backbone
- Redundant path for access swithes
- PoE Possible
- High visibility into users, their devices, applications and network usage
- Network Access Control compatible (802.1X protocol)
- Validated configuration templates (Security hardened)

WIRELESS ACCESS

- Fast and reliable wireless connectivity (802.11ac)
- Automatic mesh deployment
- High visibility into users, their devices, applications and network usage
- Easy to deploy access control and bandwidth limitations
- Network Access Control compatible (802.1X protocol)
- Validated configuration templates (Security hardened)

SECURITY

- Statefull Firewall
- Client/Site to site VPN
- Radius / Active Directory Integration
- Web Protection Optional
- Application Firewalling Optional (service publishing)
- IPS Optional
- Endpoint Protection Optional
- Network Access Control Optional
- VPN Concentrator Optional

ROUTING

- LAN Routing
- General redundancy protocol

CLOUD CONNECTIVITY

- Dynamic multi-site WAN routing Optional
- Dedicated Cloud Connectivity Optional
