

Manage your brokers more effectively by adopting Ferranti's state-of-the-art Water Broker Portal

The Ferranti Water Broker Portal is a fully compliant quoting and pricing portal that is aligned with the charging schemes of the Scottish and English Water Markets. Take full control of the interactions with your brokers - ultimately automating the pricing & quotation process from start to finish.

Built on trusted Microsoft technology, our platform offers a modern and frictionless user experience for your brokers.

The key Benefits of the Ferranti Water Broker Portal

Flexible design - can be tailored to your needs

Wholesale and Default Pricing within both of the UK Water Markets

Provides Industry best practices and easy to use templates

Supply Point validation is built-in to the quoting process

Automatically estimates Annual Consumptions, Renewals, etc.

LOA & Direct Debit information stored directly on the platform

How it works

Broker logs on to the Ferranti Water Broker Portal and enters customer information and needs.

Upon quote creation, the portal will show the script to the broker.

Using the broker's input, the platform will then calculate all charges and create a proposal.

The platform utilises Market Data and Tariff Information such as Water & Sewer SPIDs, Meter Reads, etc.

Even more complex calculations such as for Trade Effluent using SPIDS and DPIDs are included thanks to our customisable calculation engine.

The platform creates an overview of the quote, detailing all the different products and associated charges.

Brokers can also manually uplift Wholesale Prices (by % or split by bands).

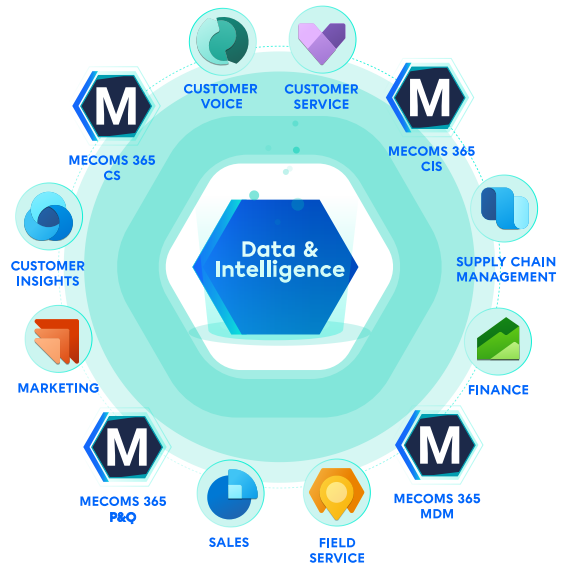

Thanks to our Embedded Security, brokers will only have access to information related to their clients.

All MECOMS 365 capabilities.

The MECOMS 365 Platform is built on top of the Microsoft Dynamics 365 Solution. This combination offers the capabilities of a complete ERP solution tailored to the specific needs of companies within the energy and utility sector.

Our comprehensive platform has a cloud-first strategy, managed and hosted by Microsoft within Microsoft Azure. The MECOMS 365 Platform is a standardized solution used by commercial suppliers, grid operators and integrated utilities adapted to country requirements and regulations by making use of Country Templates.

The focus lies on efficiency, productivity and business intelligence by using the latest tools of Ferranti, selected partners and Microsoft such as Power BI, PowerApps, Power Virtual Agents or Power Automate.
